AI Use Declaration

Project: ***Delux Bakery*** — Business Website

During this project, I used AI tools to help me learn, improve my code, and explore design ideas.

1. ChatGPT: I used ChatGPT to understand HTML and CSS, solve coding errors, improve website content, and prepare project documentation. I made design choices and edited the code according to my requirements.

2. Google Gemini: I used Google Gemini to explore bakery image ideas and create prompts for product images. I selected suitable visuals and used them for my website.

3. Canva (if used): I used Canva to arrange visual elements and prepare presentation materials.

My Contribution: I worked on the website structure, page layouts, navigation, colour palette, typography, and product sections using HTML and CSS. I reviewed and adjusted the website according to my project requirements.

Declaration: I used AI as a supporting tool during this project. I have described its use honestly and taken responsibility for the final work submitted.
